

DUPLEX

The DP 340 and 420 are extremely effective carpet cleaning machines. After filling the solution tanks and setting the brush height adjustment, simply squeeze the trigger to feed water to the twin counter-rotating brushes to scrub surfaces with an aggressive and efficient cleaning action. Because the brushes agitate the carpet and lift the pile, these units are powerful traffic lane cleaners. Twin conveyors lift the dirt-filled solution from the brushes to a central recovery tank. Or you can choose to double scrub the area and recover the moisture later. The brushes and drive unit are offset, so the brushes work right up to the edge of the machine, allowing you to clean even difficult corners. Brush options include two grades - gray is the standard and recommended for most types of carpets while yellow is for more sensitive areas.

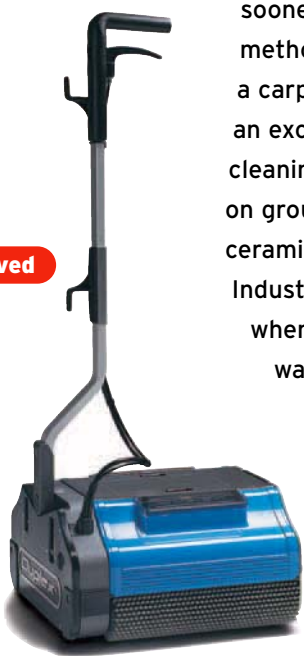

Since little water is used, carpets dry very quickly and are ready for foot traffic sooner than with other carpet cleaning methods. It's almost impossible to overwet a carpet and the DP series machines make an excellent replacement for bonnet cleaning or interim cleaning. Effective on grouted tile, rubberized floor, profiled ceramics and more, the Duplex is the Industry's best restoration machine when used in conjunction with hot water extraction.
