

FULL-SIZE SCRUBBERS

All three models automatically raise and lower the brush head and feature adjustable brush pressure. Auto shut off ensures the brushes turn and water flows only when unit is moving. Forward or reverse within 3 ranges along with infinite speed control plus an amazing grade climbing capability of greater than 10%. The self-diagnostic system tests all key machine components on start up and the low voltage shut off protects the batteries.

The steel frame and deck provide maximum strength and the anti-skid wheels are non-marking. Standard features include key, parking brake and battery status gauge

The 875 and 885 incorporate a self-tensioning belt and twin gearbox system utilizing gear reduction. The 880 uses a wet sweep system with a removable collection tray. And the twin counter rotating cylindrical brushes on the 880 can be removed without tools.

Both gel and wet lead acid batteries work with these models – see page 6 for details.
